

CHAMPS

BUILDING KNOWLEDGE SAVING CHILDREN'S LIVES

Child Health and Mortality Prevention Surveillance (CHAMPS) collects, analyzes, and shares evidence to prevent child mortality in regions where it is highest.

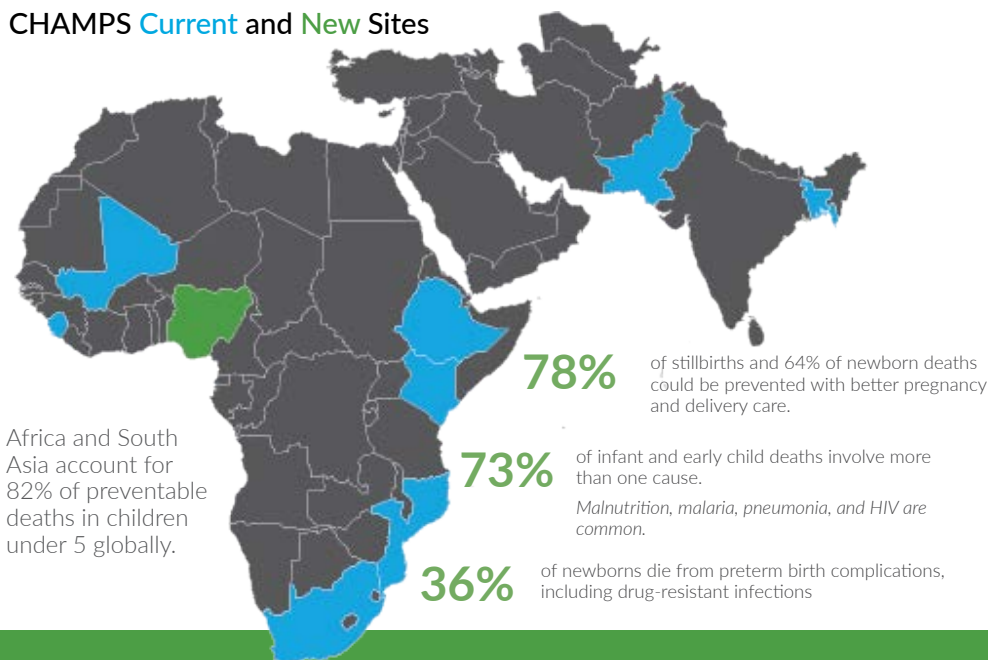

Nearly 5 million children under the age of five died worldwide in 2020.

Gaps in disease surveillance, death registries, and diagnostic testing often obscure specific causes of death, particularly in low-resource countries or geographies where child mortality rates are highest. CHAMPS engages locally, nationally, and globally to understand and address the causes of stillbirth, neonatal, and early childhood deaths.

Launched in 2015, CHAMPS surveillance, diagnostics, and results have been empowering parents, communities, partners, and policymakers to save young lives.

CHAMPS **Current** and **New** Sites

CHAMPS network sites are working to:

DETERMINE CAUSES OF DEATH

By building capacity in high-mortality areas

TRANSLATE DATA TO ACTION

To inform policy, system, and health interventions

PREVENT CHILD DEATHS

Through community-led, sustainable solutions

Funded by the Bill & Melinda Gates Foundation

Emory Global Health Institute
